DETAILED ACTION

Claim Objections

1. Claim 1 is objected to because of the following informalities:

Re claim 1, line 9: Please substitute “(hereinafter referred to as “an operable state”) with –that is an operable state--,

Re claim 1, line 9: Please substitute “not (hereinafter referred to as “an inoperable state”) with –an inoperable state--,

Re claim 1, line 13: Please substitute “(hereinafter referred to as “a Function-Being-Processed State”) with –that is a Function-Being-Processed State--,

Re claim 1, line 14: Please substitute “not (hereinafter referred to as “a Function-Being-Processed State”) with –a Function-Being-Unprocessed State--,

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting

Art Unit: 2887

directly or indirectly from an international application filed before November 29, 2000.

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1, 2, 9-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Chen et al. (US 6764017)(hereinafter referred to as 'Chen').

Chen teaches a multi-functional card comprising a multifunctional controller (41) comprising a interface (43), a status register (413), a plurality of function devices (42), and an interrupt queue (411) wherein each interrupt bit in the queue is corresponding functional device respectively, and the interrupt status queue is cleared when the host processed the function device (see figs. 1-6; col. 2, line 1- col. 4, line 36).

Allowable Subject Matter

4. Claims 3-8, 12-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

None of prior art teaches the the interface part performs a master-slave system type data communication, the activation command register of the status register group are stopped when the controller is activated, the interface part and the host apparatus connected using a command line and a data line, the status register group includes bus release registers as set forth in the claims.
